

**SPACE RESTRICTIONS  
NO OBSTACLE  
TO RAPID COMPLETION**

**W.A.** Klinger finished construction of Cargill's new soy co-process addition one full month ahead of similar projects at other Cargill locations. Structural steel for the project was detailed and fabricated in seven weeks time to allow the equipment to be set as it arrived. The rapid fabrication and construction schedule were required due to the space restrictions that this project entailed. The new facility is wedged between two existing buildings and amid large rooftop equipment that could not be relocated.

**BUILDING USE:**  
Specialized soybean processing addition

**BUILDING TYPE:**  
Steel frame with metal exterior

**BUILDING SIZE:**  
Six-story  
15,000 square feet

**SIGNIFICANT FEATURE:**  
Safely constructed between two existing buildings and amid large rooftop equipment that could not be moved

**SERVICES PROVIDED:**  
Construction and millwright services  
Fast Track Construction  
Negotiated
