

BUILDING USE:
Convention center

BUILDING TYPE:
Structural steel frame
with brick veneer

BUILDING SIZE:
70,000 square feet

SIGNIFICANT FEATURES:
Flexible convention space
and meeting rooms with
a skyway connection to
downtown hotels

SERVICES PROVIDED:
Design/Build
Fast Track Construction

DESIGNED AND BUILT CITY SHOWCASE

When the City of Sioux City decided to build a new Convention Center, they selected W. A. Klinger to design and construct it. A showcase for out-of-town guests, the Center features a 20,000 square foot convention floor with movable walls that provide flexible meeting rooms. An attached, two-story atrium contains meeting room space, offices, and spacious public areas. Light pours into the building through large skylights which cover most of the common areas. A skyway connection provides convention guests easy access to downtown hotels, businesses, and parking facilities.
